# NewViews Accounting!

## Know Now!

#### Know Why! NewViews manages your accounting with a single consistent

approach. One program, one manual, one price. No separate modules!

#### Know How!

NewViews is sccounting you can understand. You can see what you're doing, in real time. You no longer need modules, batches, journals, trial balances, charts of sccounts, or systems flow disgrsms, and you never have to close the books.

#### Know Now!

To understand NewViews, reach for the phone. The illustration sbove is all you need to see how NewViews works and why it is completely different from all other accounting systems. When you understand, your search will be over.

#### See NewViews in Action!

Csll (416) 923-4567 to reserve seats for a free seminar. They are ideal for evaluation, orientation and training.

#### **System Requirements**

NewViews runs on IBM and compatible personal computers. It requires a hard disk, 256K RAM, any monitor, and DOS 2.0 or later. Information can be imported and exported to other popular software packages. Companies, reports, accounts, transactions, branches, departments. etc., are limited only by your disk. NewViews is not copy-protected.

#### Instead of This...

#### MAKE LOTUS EASIER -AND MORE POWERFUL

Now you can have your own on-disk library of shortcuts, utilities and keystroke savers that will work with ANY Symphony or 1-2-3 worksheet (all versions). No more dull, repetitive operations, no more wading through multiple menu steps, no more hours wasted with manual input that could be automated. Introducing the ultimate collection of 101 pre-typed, ready-to-use, all purpose macros on disk. Imagine being able to:

- Add word processing features to Lotus 1-2-3, including word-wrap · Double-space your 1-2-3 printout, or
- print in super-tiny elite type · Create special graphics and slideshow
- · Add a pop-up notepad, calculator and appointment calendar to your files · Address form letters and print labels

presentations

automatically · Add menu-driven financial formulas and math functions

#### INCREASE YOUR EFFICIENCY WITH 101 MACROS FOR LOTUS 1-2-3

You can save keystrokes, save menu steps, save time and automate your spreadsheet. Speed data entry with any one of three special Data Entry macros. Whip through complicated menus with a single keystroke, or set up your own custom menus. Eliminate repetitive operations with macros that will move down columns or across rows, changing each cell to your specifications.

#### You Can Do This. . .

#### Act now. For a limited time you get not only a complete collection of 101 macros

with User's Manual, you will also receive an extra collection of 22 macros designed to help you type your own macros. a blank memo template with word-wrap and fancy printout, and a collection of Often Overlooked Tips for Lotus Users.

"A simplified way to access 125's and Symphony's -PC Wirk, 10/86 54 123-tamma arsenal , become a macro mayor -PC Magazine, 1286 'One of the best want to learn more about 123 and

## **SPREADSHEET CLINIC**

A baffling bug in the @@ function, protecting files from mistaken saves, a /Range Input equivalent with testing capabilities, and speeding up Framework II MOVEs.

#### A 1-2-3 @@ FUNCTION OURK

There is an odd quirk in 1-2-3's @@ function that I thought I would pass along. In a blank spreadsheet, enter the values in cells C3, C5, and C8 from Figure 1, C3 is a plain number, 4, and the other two cells contain the formulas displayed in column E. Note that the long formula in C8 is just a roundabout way of referencing cell C5. As you change the value in cell C3 to, say, 5, C5 and C8 will change to 50.

Now, copy these three cells to some other place in the worksheet, say D3. The cell with the @@ formula (D8) will now have the value 0. If you change the value in D3 to 6, D5 will naturally become 60, but D8 will show the value it should have had just after you copied it, namely, 50. If you change D3 to 7. D8 will update, but will still lag by one step and display a value of 60 instead of 70. Every time you change D3, D5 will show the right value, but D8 will always be a step behind.

Stranger still, if you now go to D8 and hit F2 then Enter, D8 will catch up to D5 and will stay caught up. If you change D3 to 12, for example, both D5 and D8 will show 120. I have no clue as to why sometimes you get a lag or why simply by hitting F2 and then Enter you can change the way the formula behaves.

Fric Marcus Woodmere, New York

I don't either. And, in fact, when I tried this it didn't work exactly the way Mr. Marcus said it would, though I got strange enough results. To give the @@ function a simpler test, I added the values in cells <=== +C3\*18 --- 60(@CHAR(@CELL("col", ICS)+64)&@STRING(@CELL("row", ICS),8)) <--- 66(E3)

Figure 1: A worksheet demonstrating a quirk in the 1-2-3 @@ function.

C11 and E3. This makes for a convention-LIMITING VALID DATA ENTRY al use of @@: C11 refers to a cell address The macro shown in Figure 2 takes comlabel in E3, which is C5. Thus C11 should plete control of data entry. You'd use it

when you wanted to limit the parts of the display the value in C5 just as C8 should. Copying or moving the formulas didn't spreadsheet that were available to the user, affect them. But when I changed the foras a control of the kind of data he could enmula in C5 (to +C3\*5), I got results of 0 in ter. When the macro is running, it will not both C8 and C11. That is the tip-off that allow the cursor to move out of the current something has gone wrong. Sure enough, column, nor will it allow cursor movement every time I changed C3, the results in C8 any lower than row 115. If you enter data and CII were one step behind. Also, when that passes the @code test in the eighth I "corrected" the @@ formulas with F2 line of the macro, that data is entered in the current cell. Hitting Esc ends the macro. then Enter, I permanently updated them, just as Mr. Marcus found

Note that the labels in columns A and C are range names that apply to the cells to their right. The labels in column B are not part of the macro and should be blank when you write it. In Figure 2 they indicate that the macro was exited properly with Escape, and that the last label entered was APRIL. Note that the next-to-last line in the macro, which appears to have an absolute cell address, actually contains the following formula:

+"[LET "ASCELLSOINTER("ADDRESS") A". seno 11"

If you wanted to, you could modify the

Perhaps most disturbing, however, was that when I tried the same trick in a different spreadsheet, I couldn't get the @@ formulas to lag at all. They always reflected the value they were supposed to. Another time, I got my short @@ formula to lag but not Mr. Marcus's long @@ formula. This variability makes me suspect that

some readers who try this will get a lag Some canny reader may yet write in with an explanation-I've been proven a simpleton before-but I'm just as baffled by this as Mr. Marcus is.

and others won't.

PC MAGAZINE . MARCH 31, 1987

#### ■ SPREADSHEET CLINIC

Figure 2: A macro that incorporates @code testing to limit input to certain cells only.

macro so that it allowed limited movement right or left. Also, if you wanted to enter both numbers and labels, you could include an additional test to see whether the first key pressed was a number or a label. On the basis of that test, you could branch to a {getnumber} instead of making the macro always flow through a {getlabel}. Robert Wittbrodt

Iron, Minnesota

The results of this macro are suspiciously like a feature that 1-2-3 already has: Range Input. That command allows the cursor to move only to certain designated cells for data entry. However, the @code test is something you could use to test for valid data in a way that /Range Input doesn't offer. Also, I like the use of {look}, {get}, and {let}. It all adds up to a sophisticated macro that, even with Mr. Wittbrodi's comments, will make you reach for your user manual.

#### SCREEN UPDATES AFTER (LET)

In the Spreadsheet Clinic of September 16 (Volume 5 Number 15), Mr. McLuckie points out that the partial recalculation functions, {recalc} and {recalccol}, in 1-2-3. Release 2.0. are not immediately reflected by an updated screen. He proposed the inclusion of {windowsoff} {windowson) after any use of {recalc}. This sequence redraws the screen, updating any values that have been recalculated.

Mr. McLuckie's useful solution can also be applied to another function that does not automatically update the screen: {let}. Consequently, I have written a subroutine called {refresh} that does nothing but invoke {windowsoff} {windowson} and then return. I use this handy subroutine | COPY and then delete the original. The

On an entirely different subject, I have heard many complaints about the fact that 1-2-3 can sort by no more than two key fields. Recently I had to do a five-level sort and duplicated the process we used in the old days with IBM card sorters; start with the low-order sort and repeat the process

immediately after {recalc} or {let}.

until you have sorted by all fields. If need be, you can write a macro to do the job. Anthony Woodworth Wellesley Hills, Massachusetts

It's true that {let} does not update the screen. The statement {let AI, AI + I}, for example, will take effect as soon as it is run in a macro, but A1 will not immediately show the incremented result 1-2-3 does however, display the CALC sign at the bottom of the screen to let you know something's not up to date. Curiously enough, you get the CALC message even when the recalculation mode is set to automatic-about the only time I can think of

when you'd see it in that mode. Yes, {windowsoff} {windowson} will certainly update {let}, but it's more than you need. Unlike {recalc}, just hitting Return or even moving the cursor will trigger an update. Thus, my choice for writing {let} would be {let A1, A1+1} . That final tilde is all it takes to get an update.

#### **OUICK MOVES IN FRAMEWORK** In Framework II, it's actually quicker to

use the COPY command when you want to MOVE something. MOVE takes forever to transfer data from one part of a spreadsheet to another. By comparison, COPY is almost instantaneous. Therefore, in order to move the contents of even one cell, I use

difference in speed is even more noticeable in large spreadsheets.

Of course, you have to be careful when you COPY formulas. Unless the cell references are absolute, they will be different after the move, and leave you in a mess. Text, of course, is easy to COPY because it never changes.

> Donald F. Pooley Vancouver, British Columbia Canada

#### PROTECTING FILES

Most people who use 1-2-3 save their updated work every so often by using the command sequence /File Save < Enter> r. The <Enter> is in response to 1-2-3's display of the name that the file was last saved under as the name under which 1-2-3 proposes to save it again. The r is for "replace" and tells 1-2-3 to go ahead and write over what is currently on disk,

Many people use this sequence so often that it becomes second nature, but it can trip you up. If you have started a brandnew worksheet instead of reading one in from disk, it has no name. Consequently, if you use the same /File Save <Enter> r sequence, you won't update an earlier version of the file; you'll mistakenly write over the first 1-2-3 file from the current directory that is displayed in the control panel. You'll also find that you've given your new worksheet the same name as the worksheet you just destroyed.

I have found a way to eliminate that problem. 1-2-3 displays files in the control panel in alphabetical order, with numbers coming before letters. Therefore, I created an empty worksheet, named it 0, and used the DOS 3.1 ATTRIB program to make it a read-only file. (You could use a commer-

#### ■ SPREADSHEET CLINIC

cial file utility to do the same thing.) I keep this file along with other worksheets in my 1-2-3 directory, and it always appears first in a control panel display of files. Now if you save a fresh spreadsheet with that name, you'll get a "Cannot create file" error message. That is a reminder to save the file under a name of its own.

This safety measure is especially useful in an office where many people—some of them beginners—use the same computer.

Satish lasti

Redford, Michigan

Even if you don't have a way to turn the worksheet named 0 hino a read-only file, just having it in your directory will give you some measure of protection. Should you write over it by mistake, you'll soon find that you have named your new worksheet 0, which is probably not what you had in mind. At that point, you could give it a proper pain.

I try to avoid the problem by always saving a new worksheet under a unique name before I actually begin building the model.

#### MORE FONTS FOR 1-2-3

At first glance it looks as though the fonts that come with 1-2-3, Release 2.0, are much the same as those that came with Release 1A. On closer inspection, however, the newer characters prove to be smaller. If you find, as I sometimes do, that these new fonts are too small to be read clearly, you can still use the old 1A fonts with the 2.0 printerarab program.

The old fonts have the extension .FON, while the new ones have the extension .FNT. This doesn't mean they're incompatible. If you rename them to .FNT, they work fine. I copied the old fonts to my hard disk with the command

copy a:\*.fon c:\lotus\??????a.fnt

This command gave all the old fonts the right extension and added an A to the end of the font names. The old fonts now show up on the font list when I run the printgraph program, and the A tells me that they are from Release IA. I use both sets of fonts, but I generally find the old ones more to

Jeff Rivett London, Ontario Canada

## STRAIGHT TALK

## Our NETBIOS LAN/Gateway

...bas been designed by our professionats to meet the most exacting standards. If you need assistance with a LinkUp Gateway installation, just call us. Our lechnicians in Scottsdale will belp you, or, under LinkSupport, will be on your doorstep within 48 bours... probably much sooner. And if they can't make it, call me, and I will.

> Jim Pitre, President

With LinkUp Gateway your beginning is just that ... a foundation that works.

Develop your software and computer systems as upgradable assets. Begin with our LinkUp 3270 SNA/BSC LAN Gateway connection to the mainframe featuring:

- 32 Sessions
- Three layer Application Program Interface
- Onboard coprocessor
- Single diskette provides all software for your entire Gateway System
- Complete Hardware/Software system—\$2490.
   then expand or change as your needs require to include.
- · File Transfer
- High-Speed dedicated printer port via LinkUp SpeedPrint

These intelligent software capabilities offer the options your computer environment just may require. For today. For tomorrow.

#### 

\*LinkSupport—Emergency Care

In addition to our 800 roll free support line, Information Technologies, Inc. stands ready to help you in critical situations. We're different because if our product fails to perform as specified, and it can't be resolved from Sociotadie, we will come to you anywhere in the contiguous 48 states at no charge. If the problem is caused by your PC, the way you've configured it, he mainframe, or any reason other than our product, then you pay our standard consulting fee plus expenses.

#### C(0)0)0(0)0(0)0(0)0

Call us. Our engineers speak SNA/SDLC, BSC, ASCII, EBCDIC and Human.

# CONNECTIVITY CLINIC

Our newest department begins with answers to the questions most frequently asked by connectivity product users, as posed by networking manufacturers.

This issue begins Connectivity Clinic, in which contributing editor Frank J. Derfler, Jr., answers your tough questions about communications. In the spirit of PC Magazine's ongoing commitment to hands-on solutions to your computing problems, it tackles what really works and what doesn't. The format, like that of PC Advisor and PC Tutor, is question-and-answer. Feel free to submit your questions on local area networking, microto-mainframe communications, PBX applications, and long-distance digital communications. Send your inquiries to Connectivity Clinic, PC Magazine, One Park Avenue, New York, NY 10016.

#### WHO NEEDS NETBIOS?

I am writing specifications for a local area network to be used in our school. Some LAN companies advertise that their products are NETBIOS compatible. What is NETBIOS and what does it get for us?

NETBIOS is a program that integrates the hardware on a specific manufacturer's network interface cards with networking splware and networked applications. Sytek and IBM developed the firm' 'sstardard' verston of NETBIOS. IBM' STEBIOS. THE BIOS itse the Sytek network interface boards (used by BMI ints PC Network) the IBM Token-Ring Network interface boards to IBM's PC Network Program or its successor, IBM's PC Local Area Network Program.

Technically, NETBIOS does four jobs for a network. First, it provides point-topoint communications. Network stations are connected with a point-se-point comnection called a virtual circuit. This is useful for sharing disk drives and princers anong workstations and for functions such as electronic mail. Second, NETBIOS estage track of the anne given to each user on the network. Third, NETBIOS establishes assiston between users over the onwork. The exchange of data in a session is work. The exchange of data in a session is a packet known as a datageran and transnit is out to the network. Acknowledgment and retransmission of datagrams are the responsibility of higher-level software responsibility of higher-level software

such as the networking program, Not many of the network applications programs currently on the market actually make full use of NETBIOS, but many programs modified or written for NETBIOS are promised "isoon."

Network companies have scrambled to create NETBIOS programs able to present

 NETBIOS is a program that integrates the hardware on network interface cards with

networking software and networked applications. the same face to the networking software as the Sytek/IBM products. They have had mixed success. Companies as big as AT&T and Ungermann-Bass have had to tweak and twiddle with their NETBIOS programs to make them compatible.

#### LAN OR MINI?

This may sound like a dumb question, but I am not sure that I understand the difference between a LAN and a minicomputer with a lot of terminals.

This question isn't dumb; in fact, it is the one most commonly asked in the seminars we teach. The line between a minicomputer and a LAN is theoretically very clear, but in practice it gets more blurred with every passing product amouncement.

With a minicomputer, all applications program execution and storage is centralized. A minicomputer executes the applications program in its own processor and RAM. The minicomputer sends data to the terminals and accepts keyboard input from the terminals.

In a PC-based LN, the applications programs are centrally stored on the server, but they are executed in the processor and RAM of the local workstation. The server runs programs, but they are associated with file sharing, security, and other special network functions. Some servers now run network amplica-

tions such as electronic mail and communications gateways, in which the servers treat the workstations very much like a minicomputer treats its terminals. Some minicomputer systems now have very

#### CONNECTIVITY CLINIC

smart terminals able to do a lot of local processing of data before and after the data hits the applications program in the

Formerly, workstations on a PC-based

LAN always had some local disk-storage capability. Now Novell, Santa Clara Systems, and several other companies are marketing diskless workstations that still execute the program locally but rely totally

on the network server for storage.

Alloy, Advanced Digital, and Kimtron, among others, market systems with multiple processor and RAM cards in a single central cabinet with disk storage. Each processor is dedicated to a remote terminal. I consider these products to be LANs with very short connections between workstations and very long keyboard and monitor cables.

#### THE UPGRADE PATH

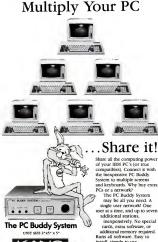

We are considering upgrading six standard PCs in our office with hard disk drives. Would we get improved performance or have significant cost savings by connecting the PCs to an existing AT through a local area network?

If "performance" means simply how fast you can load a file from disk, then adding local hard disks is probably the best choice. It's simpler and cheaper. Howev-

 Inexpensive network cards, such as those being offered by Western Digital, are just around the corner.

er, inexpensive network cards, such as those being offered by Western Digital. are just around the corner.

Your decision really involves more than performance and price. Do you put any value on the ability to easily exchange files or to share a printer? Is electronic mail or a common office calendar worth anything to you? If all you want is fast disk service. then the scales tip toward individual hard disk drives. But if these other factors have value for you, it doesn't take much to move the balance toward installing a LAN. Be warned however, that your existing PC AT may not be the ideal LAN server. It's fast enough by itself but doesn't have all that much speed to provide fast, efficient file and printer sharing among half a dozen office users.

may be all you need. A single user network! One user at a time, and up to seven inexpensively. No special cards, extra software, or additional memory required.

install, simple to use.

#### IPRINT...the Laser Office™

Developed by Indigo Software, Ltd.

Only \$34995

"We recommend IPRINT for those users who need to create forms, merge text with graphics, or enhance their Lotus 1-2-3 output...IPRINT will certainly meet the needs of most business users who need a cost effective, easy to learn program." — Shann Raiston, Publisher, PC Publishing

Runs on IBM PC/XT/KT with only 384K RAM; CGA, EGA or Hercules MGA; 2 flopples or hard disk. Supports mouse; networks and the following laser printers or compatibles: HP laserlet/laserlet +. Canon LBP-8a1/LBP-8a2, IBM-3812.

AST TurboLaser, Quadram Quadlaser, Xerox-4045.

## POWER USER

Cross-file operations in WordPerfect, concatenating dBASE macros, WordStar strokes for WordPerfect folks, solidifying lines in Microsoft Word, bolder dBASE report headings.

#### AN S/R WORDPERFECT MACRO

How about a multiple-file global searchand-replace operation in WordPerfect? I developed this macro when I changed modem specs (ports and speeds) for about the fifth time and decided that a simple findand-replace macro, used on one file at a time, wasn't a very efficient way to change 20 command files for Crosstalk,

The macro Change works from a blank document, with the List Files directory (<F5>=) set to the directory containing the files to be modified.

For changing WordPerfect documents. the macro is shown in Figure 1. The last lines shown indicate the changes needed for working on non-WordPerfect text files. e.g., Crosstalk .XTK files.

Note that while quotation marks should not be used with the find-and-replace strings in the Replace function (unless they are actually part of the subject or new text), they are required with the List Files Word Search function if the string contains more than one word or you are using pattern matching with \* or ?.

This macro, most useful when you have the WordPerfect Library Macro Editor, lets you key the whole thing in only once and then edit just the text strings.

Anthony W. Rairden Wilmington, Delaware

What makes this work is WordPerfect's ability to read through the files and list only those that contain the selected text to be changed. Since few word processors have this feature, there are few that can applies equally well to external macro programs such as ProKey, SuperKey, and SmartKey, all of which will let you edit the macro at will .- M. David Stone

#### LINE GRAPHICS WITH WORD Microsoft Word doesn't print all the line

graphic symbols in IBM's extended character set. Word uses ASCII symbol 196 (the horizontal line symbol used in almost all line graphics) for its nonbreaking hyphen symbol. So that you are not left without a horizontal line symbol when you print, Word substitutes ASCII 45 for AS-CII 196. This makes straight horizontal lines print as a series of dashes that don't match up with any of the mating line graphic symbols. Fortunately, power users

Word's printer drivers (PRDs) let you map any printed symbol into any other symbol, Start by using the MAKEPRD EXE utility to convert the .PRD file into a text file. (Documentation for MAKE-PRD is in the Printer Information manual that comes with Word.) Then use Word

both to load the text file and modify it. Each font description in the printer file

has a Character Translation Pointer (CTP). If the CTP reads CTP:Tn, n is the number of the CTT to be modified. Simply add the line 196: "-" to the CTT. If the CTP reads CTP:NIL, then there is no CTT for that font. In this case, create a CTT section that

cCSD:1 chFirst:196 chLast:196

looks like this:

(See the Printer Information manual for details on where the CTT goes within the printer file.)

In either case, the symbol between quotation marks is the symbol that prints when Alt-196 on the numeric keypad is pressed. And in either case, the line 196:"-" re-

maps ASCII 196 so that it prints the symbol for ASCII 196 instead of printing the symbol for ASCII 45. Complete the job by converting the

modified PRD back to binary with MAKEPRD. You might want to rename

F5 filespec (Enter)

have a neat way out.

"Final Property of the Control of th

adapt the macro. Rairden's last comment | Figure 1: A WordPerfect macro that performs multiple-file global search-and-replace operations

#### ■ POWER USER

the PRD to remind you that it's modified. Load the modified PRD into Word with the Print Options printer command, and you're ready to print far better graphics than before. Be aware that some printers emulate the IBM extended character set by a different method. The above procedure may not work for them.

Bill Kraengel, Jr. Valley Stream, New York

The really nice part of this fix is that nonbreak hyphens, as in 1-2-3, still look like hyphens at the printer.—M. David Stone

#### WP FILE-HANDLING FEATURE

A very useful feature of WordPerfect 4.1, not documented in the user's manual (although explained in the Help feature), allows you to do multiple/mass copying, deleting, or printing while displaying the directory file list (List Files).

You mark the files you want to copy, delete, or print by pressing the asterisk (\*) delete, or print by pressing the asterisk (\*) invoking the Mark Text (Alt-F6) function, you can mark all fles in the directory list. [In my copy of WordPerfert 4.1, the key is Alt-F5.—Ed.] Once the files are marked, you can select the permitted option by number from the menu.

Tom Dunnigan Jeffersonville, Indiana

Aside from the obvious uses of this feature—copying selected files to a different subdirectory or disk or printing several chapters of a manuscript-there is at least one other way to squeeze some use out of marked files. The Word Search option of the List Files menu allows you to search all documents in your file list for specific text strings, after which only the files containing the string(s) are displayed. Simply marking all files by depressing Alt-F5 before the search will present you, after the search, with a complete directory listing in which an asterisk marks each file that contains the string. You could then perform mass copy, delete, or print operations on the marked files. You might find other uses for this little gem, as well.-Mitt Jones

#### SPEEDING UP WORDPERFECT

That tired workhorse, WordStar, eats WordPerfect's dust at most tasks, yet in actual use it is by far the faster editor. In WordPerfert, every milor cell requires a sequence of ineflicient actions: lift your right hand, move it to the number pad, oct, then return to the keyboard and locate the correct finger position. In WordSur, you can cell without ever iffing a street in principle of the property of the pr

If you build a table of keyboard macros, however, you cause WordSuss's more efficient keystrokes to give commands in WordBerfers. Since WordBerfers's sown macros are limited to Alt-key rather than Crit-key combinations and would use up a lot of macro possibilities you might want for other purposes, a better choice would be an external macro handler like Super-town of the word 
Building a nearly full complement of WordStar key definitions in Super-Key takes only about 5 minutes. You can't takes only about 5 minutes. You can't clone WordStar's two-character commands (like Ctrl-KB) because Super-Key doesn't allow two-key marcns. But Word-Perfect wisely assigns most of those commands to the function keys anyway, and exceptions can be assigned to a single key, such as Ctrl-O.

When you're finished defining the Ctrlkey macros, save them as a file with a descriptive filename, such as "WSKEYS." Then the line

KEY WSKEYS /ML

added to your AUTOEXEC.BAT file will load SuperKey and immediately activate the WordStar macros whenever you turn on the computer.

George R. Beinhorn Atherton, California

I've been using this trick for some time, but with ProKey rather than SuperKey, and with Microsoft Word as well as with WordPerfect.

The word processing world seems to be

The word processing world seems to be divided into those who like using arrow keys and those who don't like taking their hands from the keyboard. Redefining the

keyboard makes programs like Word and WordPerfect far more palatable for thase of us in the second category.

For thase who are unfamiliar with the WordStar diamond, it's worth pointing out that the WordStar cursor control keys are not only easier to get to than the arrow keys, but are also easy to remember. The E. X. S. and D lie on the four points of a compass, and each moves the cursor in the direction indicated by its relative layout: up, down, left, or right. [For some of us this is not easy to remember: it is not only antimnemonic but adds a layer of cognitive dissonance for the touch typist. (Try to type the X in Ctrl-X with your ring finger.) However, as Stone notes, there are different strokes for different folks .- Ed. 1 Notice, too, that one key over from S (left a letter) is A (left a word) and one key over from D (right a letter) is F (right a word). Anyone can quickly learn these six keys. Other WordStar commands that are equally useful, but harder to learn, include Ctrl-G for Get rid of one character, and Ctrl-T for Take away one word.

Not so incidentally. WordPerfect users should be aware that programs like Super-Key and ProKey have at least one additional advantage over the WordPerfect macros besides letting you define Ctrl-key combinations. Both of these programs create macro files as text files. These can then be easily edited without needing the Word-

Perfect Library. Finally, the line for automatically loading the macro program is best placed in a batch file that calls up the word processor rather than in the AUTOEACE BAT file. Otherwise, the WordStax macros may interfere with Ctrl-key commands in other programs.—M. David Stone

#### PAUSE PLUS

Debbie Cucci's pause routine (Volume 5 Number 20) for dth.95 a poljcations is very useful, as you suggest. However, different messages require different amounts of attention. Moreover, because different processors run at different speeds, a delay routine based on the execution time of a DO LOOP is not very portable: a satisfactory delay for a PC running at 4.77 MHz will be almost halved by a 6-MHz AT. comoile and run it on a Compasa 386, and

you may not even see the message!

## YES. YOU CAN!

PC AMERICAN MAKES IT POSSIBLE FOR YOU!

# My department They said that putting data processing in control of PC software was too much trouble took all the blame Then people started copying software. When we were such guess where the tingers pointed.

Software piracy is a Federal crime. At ADAPSO, the computer software and services industry association, we're working to help data processing managers like you prevent the problem. And to help your company avoid substantial fines and legal fees.

You can help top management protect your company by actively discouraging software piracy. ADAPSO can provide you with sample policy statements and free booklets for company employees.

Just return the coupon. It could put you back in control. And it might keep your department off the hook.

\*\*\* PAUSE. PRG pana ness, du 22 CHR(7) SET CONS OFF mess=CHR(26)+" "+mess+" "+CHR(27) 24, (SP-LEN(mess))/2 GET mess CLEA GETS ntl=# DO WWIL cntl<dur time=TIME() WHIL time-TIME () 24.0

Figure 2: A dBASE III procedure to display temporary messages of variable duration.

SET CONS ON

One solution is to use the system clock for the timing of delays. The enhanced routine above (Figure 2) passes two parameters: the message and the desired du-

ration in seconds. For example, DO pause WITH message, 3

The message will be displayed for 3 seconds in this case. By using the system clock, we have time on our side.

Robert J. Borter, Jr. Ocala, Florida

Judging from the number of responses to the original PAUSE.PRG, a lot of programmers have need for such a procedure. and Mr. Borter has added a useful time parameter.

Unfortunately, dBASE reads the system clock only in whole seconds. Depending on where you land in the cycle, a "Isecond" pause could be as short as .01 seconds or as long as 1.99. Hence, Mr. Borter's routine will be a little unpredictable if 1-second displays are passed.

By contrast, Nantucket's Clipper compiler offers a SECONDS() function accurate to 1/100 of a second-just like the DOS system clock. Perhaps future releases of dBASE will, too .- Brad Stark

#### ENHANCING dBASE REPORTS

In a long dBASE report, Group and Sub-Group headings don't stand out at all-they seem to get lost in the body of the report. I recently discovered a neat little trick: you can embed printer control characters right in the dBASE .FRM file to make your headings as bold and brassy as you please.

For example, suppose you are produc-

# WHY NOT GIVE PC MAGAZINE AS A GIFT?

A subscription to PC Magazine is a gift that will bring your colleagues, friends or clients important information about products to help them make the most effective product selections for their IBM/MS-DOS standard system.

Every issue will bring them comprehensive comparative product evaluations based on testing in the PC Labs, the publishing industry's only testing laboratory for IBM and compatible PC hardware and software. Plus, they'll learn about short-cut routines, applications and power tips to help them work smarter with their system.

PC Magazine, the one business gift that's right to give all year long! Act today and give one year (22 issues) of PC Magazine for only \$24.97—a saving of 62% off the regular single-copy price of \$64.90.

#### ■ POWER USER

ing a report sorted by State and then by City, and you are using these as Group and Sub-Group fields on page 2 of the dBASE III Report Form Generator, Normally, you would enter the field names. State and City, as the Group and Sub-Group expressions, and the character strings, STATE and CITY, as the Group and Sub-Group headings.

Assume further that CHR(14) turns on doublewide printing for one line, that CHR(27)-CHR(69) turns on emphasized printing, and that CHR(27)+CHR(70) cancels emphasized printing. To make your Group information print doublewide, just enter the following as the Group expression:

#### CHR(14)+"STATE: "+State

Note that the Group heading ("STATE:") is incorporated as a character string within the Group expression, and both will print doublewide.

To emphasize the Sub-Group similarly, enter this as the Sub-Group expression:

CRR(27)+OR(49)+\*\*CETY: \*\*CETY+OR(27)+OR(78)

In this case, the escape sequence, CHR(27)+CHR(70), is required to cancel emphasized printing—otherwise it will continue throughout the proof.

dBASE's .FRM file can be used in this way to send any other printer control characters and escape sequences you like; just remember to cancel them each time.

The main Title and Column headings are more difficult because dBASE treats these strictly as character strings. The Alt key plus numeric keypad combination seems to work. I tried the ASCI characters from 1 to 32 without success, but when 1 added 128 to the desired ASCI number 1 found that the 128–160 range produced the desired ASCII.

Chris Brown Jacksonville, Florida dBASE's report generator is rather limited, but Mr. Brown's creative idea squeezes at least a little blood from the

sione. Here are a few more suggestions. Group and Sub-Group headings will stand out even more if you insert a carriage return. CHRIS-1+CHRI(10), at the end of the Group and/or sub-Group reseasor. You can whether the bendings either by using except sequences or by inserting a carriage return followed by a consequence of the continuation of the c

To make your Group and Sub-Group expressions more readable to yourself, you may prefer to initialize some memory variables and use these instead of the actual escape sequences. For example.

#### ■ POWER USER

#### Then, for your Group expression, enter uline+"STATE: "+State

instead of

CHR(27)+CHR(45)+CHR(1)+\*STATh: \*+State

In some coses, you might wout to enhouse the contents of a whole column, though this will slow your printer's output considerobly. Again, you'll have to experiment to get the desired result.

I was not able to duplicate Mr. Brown's success in enhoncing the main Title and Column heodings by using the Alt key plus numeric keypad combination. However, since dBASE's HEADing option does transmit escope sequences, you might substitute o HEADing in ploce of the regular Title. Another work-around to enhance the main Title takes advantage of the foct that in printing the report, the optional HEADing olways precedes the moin Title and the Group heading always follows it. Thus, for example, you could use the HEADing to transmit the main Title's sequence, then stort the Group expression with the cancelling sequence.—Brad Stark

#### DOUBLE MACRO FUNCTION

While the dBASE macro substitution function (the "&" symbol) is very useful in itself for shortening code, you can get even more mileage from it by concatenating two

macros. For example: raquame PC Fécazine

This powerful capability allows greater flexibility in array simulation and field selection routines. Since working with the function in this manner. Lalways keep it in mind when namine fields for any new database systems.

Chris Brown Jacksonville, Florida I had to see these lines work to believe it. In simulated arroys or other complex routines it lets you replace whole blocks of commands with a little DO WHILe loop, (But the code for double mocros will make tough reading 6 months later.) Power users will find this technique as slick as goose greose, and dBASE II, Version I of dBASE III, oud dBASE III Plus oll occept both the double macro and even the &o. &b syntax --- Brad Stark

# User-to-user

A powerful DOS MID\$ filter, two improvements for FIND wildcard searches, file linenumbering tips, and a simple technique for scanning text files quickly on-screen.

# SUPER DOS STRING HANDLER MIDS.COM is a filter that imitates the BASIC command of the same name. The format is

MIDS n.m

where n and m are decimal numbers in the range 1 to 255. The filter returns with a string of length m characters starting at an offset of n characters from the start of the string. If n is omitted, MIDS defaults to the start of the string. If m is omitted, all rightmost characters starting from n are returned.

Be sure to leave only one space between MID\$ and the first argument. MID\$ is not smart enough to scan off leading spaces, but then it is short, fast, and effective.

Like the other DOS filters. SORT and FIND, MIDS is designed to work in combination with the other DOS commands, especially the piping and redirection features. However, you can enter MIDS by itself at the prompt for a quick demonstration of how it works. Enter

MID\$ 5,3

1234567890

To create MIDS.COM, run the MIDS. BAS program in Figure 1, or use a pure ASCII word processor or the DOS COPY CON command to type in the MIDS.SCR in Figure 2, then get into DOS, put MIDS.SCR in the same directory as DE-BUG.COM, and type

DEBUG < MIDS.SCR

Michael J. Mefford Gleneden Beach, Oregon

This is truly a powerful and long-awaited utility. You can use it to clean up irritating, long-winded DOS messages, and do all sorts of DOS magic.

For instance, if you've ever wanted to use the DOS clock to time an event, you have to either set it to zero and then reset it manually, or show the starting time and ending time and ask the user to subtract one from the other, But not with MID\$ COM.

To try this, create three files: CR. ZERO, and TIMER.BAT.

CR is simply a carriage return. Type CON CON CR

and hit the Enter key twice, then hit the F6 key (or hold down Ctrl and hit Z) and then the Enter key a third time.

ZERO is not much bigger than the CR file. Type

COPY CON ZERO

0:0

and hit the Enter key again, then hit F6 and then the Enter key a third time. TIMER BAT is a hit longer: PC MAGAZINE . MARCH 31, 1987

echo off time < cr | find \*C\* | mid\$ 18 > holder echo The time ie now type holder type cr opy holder+cr holder > nul time < zero > nul echo Nait e few eeconde then hit e key pauce > nul echo You paused for time < cr | find "C" | mid\$ 18 time < cr | find "C" | mid\$ implements type cr echo seconde ... echo Now recetting the time to... type holder time < holder > nul del holder

(Figure 2 ends)

MIDS.COM is wonderful. You'll find dozens of uses for it every day.

#### SWITCHED-ON FIND

A recent PC Lab Notes column on advanced FIND techniques (Volume 5 Number 20) explained a method of using the DOS FOR...IN...DO command to handle FIND wildcards. While this was an excel-

## MID \$ COM can

clean up irritating

and long-winded DOS messages, and do all sorts of DOS magic.

lent suggestion that I now use regularly, I've found two ways to improve this batch procedure.

#### ■ USER-TO-USER

The Lab Notes procedure lacked a method for specifying different combinations of wildcards (such as \*.PAS), and couldn't add FIND switches such as /C or /V. The WILDFILE BAT batch file below allows both of these.

ECHO OFF IF \$21--1 GOTO ERROR FOR \$\$A IN (\$2) DO FIND\$3 "\$1" \$\$A

GOTO END :EMPOR ECHO The proper command syntax is: ECHO WILDFIND string filename [switches]

The WILDFIND syntax is slightly different from the DOS FIND syntax. First, the string to search for is not enclosed in quotation marks. Second, the optional switches go at the end of the command line instead of immediately after the command name. As with DOS, switches are separated from the filename by at least one space.

For example, to hunt for the string VARI in all files with the extension PAS, and then count but not display each occurrence of the string, type

WILDFIND VAR1 \*.PAS /C

Gary Later
Buellton, California

FIND and the FOR...IN...DO command are two of the most powerful DOS commands, especially when joined together. Unfortunately, each has drawbacks. An annoying one is the awful IN numbering

# ■ FIND and the FOR . . . IN . . . DO command are two of the most powerful DOS commands, especially when joined.

system. If you wanted a cleanly numbered list of all the \*.TXT files on your disk, you might think you could type

DIR \*.TXT | FIND /N \* \* > NUMLIST

However, FIND won't put spaces between the numbers and the actual entries. and it won't align the columns properly if you're going from single-digit to doubledigit numbers (or double to triple, if you have lots of files).

Worse, since the IN switch is really designed for searching through program source code, or phone directories, and not redirected DOS outputs, it will choke on empty lines and end up misnumbering everything. A better way might be to get into DOS and redirect a directory of text files into a file called IN

DIR \*.TXT | FIND n=n > IN

and then run a small BASIC program
NIIMBER BAS

188 OPEN "IN" FOR INPUT AS \$1 118 OPEN "OUT" FOR OUTPUT AS \$2 128 WHILE NOT EOF(1) 138 LINE INPUT \$1,A\$

140 PRINT #2,USING \*\*\*\*;A+1; 150 PRINT #2,CHR\$(32);A\$ 160 A=A+1:WEND:CLOSE

Another irksome thing about FIND is the "...." line it prints when displaying anything. This is easy to get rid of by going into the code with DEBUG and replacing each hyphen with a backspace. First, rename FIND-EXE to F, and

First, rename FIND.i
load DEBUG:

REN FIND.EXE F

When you see the DEBUG "-" hyphen prompt, type RCX and hit the Enter key twice. DEBUG will respond with something like

CX 19Ø3

Then, when you see the hyphen prompt again, type

S 100 L1903 "-----"

(substituting the actual hex number DEBUG reported after the CX in the previous
command, if it's different from 1903), DEBUG will print an address that looks
something like

2F71:19F7

Ignore the first four numbers (the ones to the left of the colon). Take the four rightmost hex numbers and enter them in place of the xxxx below:

E xxxx 8 8 8 8 8 8 8 8 8 8

For instance, you'd enter E 19F7 88888 8 8 8 8 8 8 8 if DEBUG returned the 2F71:19F7 mentioned earlier. Then type

REN F FIND.EXE

(hitting the Enter key after each line) and your new, patched FIND won't ever print the -----line again when displaying the strings you've searched for.

FAST FILE SCANNER
I often look at disks with lots of .BAT files
on them, and have long wanted a way to

scan through them all without using the

 I wanted a way to scan through lots of .BAT files without using the DOS TYPE command,

which can display only one file at a time.

DOS TYPE command, which can display only one file at a time.

While leafing through the IBM DOS reference manual recently, I realized that it was possible to copy these .BAT files to the screen by using the COPY filename CON command:

COPY \*.BAT CON

But while this puts every file on-screen, along with its name, DOS won't pipe this through the MORE filter. So I tried copying all the .BAT files into one master file and then piping the master file through MORE, with

COPY \* . BAT DUMMY TYPE DUMMY 9 | MORE

This kind of quick on-screen file scan works with any text files. For example, if your disk contains a README file and one called INSTALL.BAT, you can scan

them both with the following command

COPY README+INSTALL, BAY CON

Deena Eliosoff Montreal, Quebec Canada

A simple way to display lots of batch files would be to create two batch files called SCANBATS.BAT and READ.BAT. First.

SCANBATS BAT

cycles through all the .BAT files on your disk. Then.

READ.BAT performs

the actual displaying.

SCANBATS.BAT cycles through all the .BAT files on your disk: ECRO OFF FOR NAF IN (\*, BAT) DO COMMAND /C READ NAF

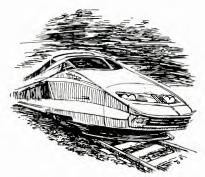

Then, READ.BAT, which is called by SCANBATS BAT, performs the actual displaying:

ECHO OFF CLS ECHO %1 TYPE %1 | MORE PAUSE

To try it, type in both batch files using a pure ASCII word processor or the DOS COPY CON command, and then type SCANBATS.

If you send a disk, please include a printout to ensure against damage in transit. Mail your contributions to User-to-User, PC Magazine, One Park Avenue, New York, NY 10016.

# How a French train inspired the fastest 286 micro you can buy.

"Grande Vitene" means high speed—in this case, 12Mhz with no west states.

We call this remarkable compatible the "GV" 286, and it's the very first 12MHz No-Watt-State micro available outside a research laboratory. To design a machine that operator reliably at

To design a machine that operates reliably at 12MHz with no wait states, our engineers had to come up with some major innovations. And they did.

#### A power user's dream

The GV-286 is the first 80286 micro to include a high-speed RAM cache circuit, making data retrieval from the processor almost instructureous. It's the same design feature that makes our new GV-386 the fastest machine in that rankes our new GV-386 the fastest machine in that rankes datagony.

The cache circuit also assures high reliability, allowing the GV-256 to operate at super-high speeds without pushing its integrated circuits beyond their design limits. Other 12MH: machines put their ICs through hell to achieve high speed, and that means they be inherently less reliable.

Yet with all this speed and design innovation, PC Designs engineers—unlike other manufacturers have customized the BiOS and retained the standard IBM PC-AT bus timing (yet another PC Designs exclusive). The result is unparalleled

comparibility with existing software and peripherals. There's a boxcar load of other design features and the GV-86 can be ordered up in virtually any configuration you can imagine. Best of all, standard systems start at less than \$4000 (including Desoview multitastings software).

#### Enter the No-Wait-State

If you've been holding out for a 80286 micro with the speed of a bullet train and the reliability of the family station wagon, your wait state is over

## THE INDISPENSABLE MARKETING TOOL FOR REACHING RESELLERS

GUIDE to VARS & DISTRIBUTORS

Target resellers in today's volatile marketplace with the completely revised Data Sources' GUIDE TO **VARs & DISTRIBUTORS.** 

Now with a whole new look—and the added value of diskettes—it's a unique marketing tool designed to help you reach resellers fast.

#### THOUSANDS OF RESELLERS AT YOUR FINGERTIPS!

Big. 800+ page directory, newly enhanced to shorten our search...company profiles on thousands of resellers in the U.S... VARs indexed by almost 100 vertical markets to save you time...learn not just that a reseller specializes in manufacturing, but that it focuses on CAD/CAM, proce control, or production...find IBM products indexed by model not just by vendor... learn which VARs maintain an inventory of products and

which don't.
PHONE NUMBERS NOW WITH EVERY INDEX ENTRY I

Part Two of your directory has phone numbers listed with every entry in all six indexes No more thumbing back and forth anytime you just need quick access to a reseller!

NO MATTER HOW LITTLE INFORMATION YOU HAVE TO START, YOU'LL FIND WHAT YOU NEED! Track down VARs by geographic location...

areas of specialization and by hardware products used and represented. Locate dis tributors by geographic location...and by hard ware and software

products carried.

WAMEDIATE ACCESS
THROUGH YOUR PC! Your informationpacked directory also comes with two Data Disks and the data

access software to put them to work for you

in the geographic area of your choosing.

Distributors DataDisk helps you find the best outlets for your products in the U.S. or Canada.

 PC Search is menu-driven. Search your VARs DataDisk on 5 different fields: by state ...annual sales...number of employees...industry served types of hardware used.

Three diskettes...for the information and the flexibility to manipulate the data into the format you need NO MORE TEDIOUS DATA ENTRY

AND NO MORE LIST RENTAL FEESI Produce labels or merge names and addresses into your form letter routines. No more cumbersome list orders, waiting weeks for fulfillment,

can leverage your own data by combining our DataDisk information with the data in your dBase III and other popular micro DBMS files. Quickly zero in on your best

COMPETITIVE EDGE Your directory and diskettes also come with unique custom market research reports packed with crucial, hard-tofind information on the resellers in the geographic area of your choice for your VARs DataDisk: industry specialization by state...gross annual sales by state...number of employees and much more

Focus on opportunities and avoid false starts. YOU'RE UPDATED TWICE A YEAR AND IT'S A PLEASURE

With each new semi-annual edition, the entire contents of your ring binder directorysection tabs, diskettes and allwill be completely replaced: no struggling with confusing update instructions or single pages to find and

COSTS THOUSANDS

Our development team did everything possible-including adding the enhancements subscribers wanted most-to bring you reasonably priced data you can trust. In fact, it's available at the lowest cost anywhere! Take advantage of thousands of hours of research designed with your

interests in mind.
WITHOUT A DOUBT, YOUR MOST
IMPORTANT MARKETING TOOL! There's no better way to

stay on top of the fastchanging reseller market. Start your next search with your own fact-filled directory, diskettes, custom market research, software that lets you produce labels and combine data with your own files, in an expanded new format that's accurate and easy to use. There's no estion, Data Sources GUIDE to VARs & DISTRIB-UTORS is absolutely

# PC TUTOR

Once you understand the implications of cluster size, you can save space on your hard disk by reconfiguring it under one of the newer DOS versions.

WHY IT DOESN'T ADD UP
I have been mystified about an apparent

I have been mystified about an apparent loss of space on my IBM 20-megabyte hard disk drive. When I run CHKDSK, it reports about 21 megabytes for stotal disk space: 12 megabytes in 770 files, and 9 megabytes five. However, when I add up the sizes of all the files manually, I get a total of only about 8 megabytes. What hapened to the other 4 megabytes.

Nobody I've talked to can reconcile this difference, which to my mind seems excessive.

David P. Walsh Chesterfield, Missouri

Over the course of my PC Tutorship, I've received several letters about this problem, usually from people whose job it is to make sure that the sum of the parts is equal to the total. (Mr. Walsh is a functial consultant), Disk space doesn't twork this way. Using a disk is like going out shopping with only dollar bills and never getting any change back.

The entire data area of a hard disk is devised into modifice areas called chair areas called chair. Files on a disk are always stored in one or custers, if the file does not fill up the last cluster it occupies, then the rest of the space in that cluster it lost. The muster is lost. The number of bytes in each file reported by the DIR commad is the size of the file when it was created or last modified. The amount of space cated or last modified. The amount of space size of the file effect rounding up to the next multiple of the cluster size.

You can easily determine the cluster size for a particular disk. First, do a DIR and note the "bytes free" value. Then create a very small file. The easiest method is by issuing the command

ECHO >SMALLFIL

Now do another DIR and see how much space you've lost. That's your cluster. That's your cluster size is always a power of 2, and for most normal disks it is a multiple for most normal disks it is a multiple size of 126 or 256, but real disks size of 126 or 256, but real disks sizes of 126 or 256, but real disks sizes of 126 or 256, but real disks sizes of 126 or 256, but real disks for 126 or 256, but real disks of 126 or 256, but real disks of 126 or 256, but real disks of 126 or 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks it is a but real disks of 256, but real disks it is 256, but real disks of 256, but real disks it is 256, but real disks of 256, but real disks it is 256, but real disks of 256, but real disks it is 256, but real disks of 256, but real disks it is 256, but real disks of 256, but real disks it is 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 256, but real disks of 2

For hard disks larger than 10 megabytes, the cluster size is dependent upon the DOS version used when the disk was originally configured with FDISK and FORMAT. A 20-megabyte hard disk originally configured under DOS 2.x has a

■ Using a disk is like going shopping and never getting any change back. If the file does not fill a cluster, the rest of the space is lost. cluster size of 8192 bytes.

On average, you will probably loss book half a cluster for each file on the disk. For the 770 files you mention, this alone accounts for about 3 megabytes. If you have a lot of small files whose length is less than half a cluster in stee, this will account for more loss. In this connection, not that sudder-cories (the created awnes of the subdirectories, not the files in them on the sust and the subdirectories, the created awnes of the subdirectories, not the files in them on the summer last thing open the paper required for data files. CHKDSK reports those flurars solt.

The real culprit here is the 8192-bye cluster size. It sounds too big for most uses, and it is. It is the direct result of the method of storing files on a disk that was introduced way back in DOS 1.0. This method limited the total number of clusters on a disk to 4767 (which is 4969 minus some cluster numbers used for special purnoses)

Under DOS 3.0 and later, however, the touch and later however, the disk was increased to 65,518. This allows using a much smaller cluster size for a hard disk. A2 or 30-megabye hard disk that has been FDISKed and formatted under DOS 3.x. has a cluster size of 2048 bytes. That's more reasonable.

(With 65,518 clusters available, it is theoretically possible to have a cluster size of 512 bytes for a 20- or 30-megabyte disk, but you really don't want clusters that small. Since files may be stored in noncontiguous areas of a disk, a very small cluster size would result in files becoming highly fragmented, which would have the effect of fragmented, which would have the effect of

#### ■ PC TUTOR

Then why not fill out the reader service card right now, send it to us, and you'll receive more information directly from the vendor or manufacturer.

slowing down file access time.)

It is interesting to note that prior to DOS 3.0 (which was introduced at the same time as the IBM PC AT), IBM did not sell a hard disk over 10 megabytes. The original PC AT had IBM's first 20-megabyte hard disk. Although it is entirely possible to install a 20- or 30-megabyte drive on a PC or XT running DOS 2.x, nobody working with strict IBM parts ever actually had a cluster size over 4096 bytes. The problem of excessively large cluster sizes was thus fixed when IBM simultaneously introduced a 20-megabyte hard disk and DOS 3. In a sense, then, it's not even IBM's problem if you have a 8192-byte cluster size.

DOWNSIZING CLUSTERS So, what can you do about this? If you have a hard disk over 10 megabytes originally configured under DOS 2.x., you can usually reconfigure it under DOS 3.x to get a smaller cluster size.

I'm going to tell you how, but you should read through this section and think about it for a while before you begin. It's a big job and it's scary. If you don't feel comfortable with it and you're not sure if you can adequately handle any problems, don't do it. OK?

I assume that your hard disk is connected to a hard disk controller and that has its own ROM BIOS, that you don't need anything special in a CONFIG STS list, and that you (or some-body at your computer store) originally configured the hard disk by running the normal FDISK and FORMAT commands included in IBMS PC-DOS 2.x.

You'll need a version of PC-DOS 3.0 or later for this. The most recent DOS version is 3.2.

First, you must back up your entire hard disk, using BACKUP. Do it rwice to play it safe. For your 12 megabytes of files, you'll need six or seven boxes of ten diskettes for the two backups. Buy high-quality diskettes for this. Format them all before you begin. Don't use any that have bad sectors.

The BACKUP command you want is BACKUP C:\\*.\* A: /S

This backs up everything on drive C:, including all subdirectories. BACKUP will

prompt you to put in new diskettes. Label them in sequence as you go, as you will have to RESTORE them later in the same order.

When you're done with the backup, boot up PC-DOS 3.2 from drive A: and then enter

FDTSK

Once in the FDISK program, you must first delete the existing DOS partition, which is one of the options on the menu. Then you must create a DOS partition, which is another option on the menu. You probably want to use the entire hard disk for DOS, so answer Yes to that question. Your system will now reboot. Make sure the DOS 3.2 diskette is still in drive A:

When you get back to the DOS prompt, you format the hard disk with

FORMAT C:/S/V

(The Vi is optional but allows you to give your hand disk volume label, otherwise known as a name.) After this is done, you can verify, that everything is running, smoothly by doing a DIR and a CHKDSR on drive C. Try reboomly with the drive A door open. Your machine should boot from the hard disk. A VER command should report DOS 3.2. At this point, you can creae a small file to see I your cluster site is indeed smaller. I should be 2048

Delete your small test file and boot up again from the DOS 3.2 floppy. Now you can proceed to RESTORE the backed-up files onto your hard disk. You should use the DOS 3.2 RESTORE command with the following syntax:

RESTORE A: C:\\*.\* /S /P
Is it that simple? Well, no.

THE PROBLEMS This whole process can be very scary, and you may encounter some "gotchas" along the way. Here are some of them:

First, some copy-protected programs installed on a hard disk may not work after a BACKUP and RESTORE. Others will. Some of the problem programs (1-2-3. Release 2, for instance) can be deinstalled. If you have any of these programs, deinstall them from the hard disk before you do your original backups and reinstall them when

you're all done. When in doubt, contact the manufacturer. (After they give you the information you need, tell them what you think about copy protection. Use whatever command syntax you feel appropriate.) Second, people sometimes have problems with BACKUP and RESTORE. Sometimes RESTORE chokes in the middle of restoring from a bunch of diskettes. That's why you should do two BACKUPs.

You may want to take other precautions: Your hard disk probably has a number of purchased programs on it and a number of your own data files in various subdirectories. You can probably re-create those pacchased programs from the original diskettes. For your own data files, particularly the ones most valuable to you, use the regular COPY command to copy them to diskettes.

Third, BACKID will back up hidden Third, BACKID will back up hidden files called BibBIO COM and IBMDOS COM. When you run RESTORE, wount to use the P switch as shown above, which prompts you when it is about back-up over existing read-only files. When you get the prompt for IBMBIO COM and IBMOS.COM, answer No.

Fourth, RESTORE will still copy the old version of COMMAND COM from the backed-up floppies to your hard disk. Thus, when you are done with the RE-STORE operation, recopy COMMAND COM from the DOS 3.2 floppy diskette to the root directory of the hard disk, using the command

COPY COMMAND.COM C:\

If you boot from the newly formatted hard disk before running RESTORE. DOS will try to load the COMMAND. COM from the hard disk after RESTORE is completed. But this would be the old COMMAND .COM. This is why I recommend booting from the DOS 2.7 floppy before beginning RESTORE. When RESTORE ends, you will be prompted to put the DOS disk in drive A:, so it can find the correct version of COMMAND. COM.)

of COMMAND.COM.)
Fifth, diper you're done with the RE-STORE, your hard disk will have regained copies of all the old-version DOS external programs, such as CHKDSK and MODE. You must replace these with the new DOS 3 versions. DOS 3.2 has a command called REPLACE that automates this process.

Sixth, sometimes even after all this, funny things happen. For instance, you may have trouble booting from drive C:. If this is the case, boot from a DOS 3.2, floopy and get into FDISK again. Choose the "Change the Active Partition" option in the menu. If the status of the DOS partition is marked "N", it means it's nonactive,

■ PC TUTOR

■ People who must have their disks recognizable by DOS 2.x shouldn't reconfigure their hard disks, but should put up with the large clusters.

which explains why you can't boot from it. Make it active. Indeed, sometimes just entering and leaving FDISK fixes the problem by itself.

If you think that your hard disk still has the old DOS IBMBIO, IBMDOS, or COMMAND files on it, you can boot from the DOS 3.2 floppy and execute the commands

SYS C:

and COPY COMMAND.COM C:\

This will reinstall DOS 3.2 on the hard disk

Seventh, if you have a tape backup unit and you would rather use that instead of BACKUP and RESTORE, you should determine whether it does a file-by-file backup or an "image" backup. Many tape backup units give you a choice. You want to do a file-by-file backup. If your tape backup unit can only do an image backup. don't use it. The image stored on the tape will include the hard disk's file allocation table, and this will be a different format under DOS 3.x. When you restore the hard disk from the imaged tape, the old file allocation table will be copied back to the disk. No good, If you do a file-by-file backup and restore, it will probably copy over the DOS files. Boot DOS 3.2 from drive A: and do the SYS command and COPY of COMMAND.COM before you try booting from the hard disk.

Eighth, after you've used DOS 3.x FDISK on a 20-megabyte or bigger disk, you cannot use the hard disk with any DOS version prior to 3.0. If you subsequently try to boot up from a DOS 2. x ftappy, DOS simply will not recognize the hard disk. Some people (program developers, mainly) need to test programs under several DOS versions. These people may need to have their hard disks recognizable by DOS 2. x. They should it reconfigure their hard disks, but should put up with the wastfully large 8192-byte cluster size instead.

Finally, this whole discussion is based on the IBM version of MS-DOS (which is called "Personal Computer DOS" by IBM and commonly called "PC-DOS" by the rest of us.) Some versions of MS-DOS for other manufacturers' machines may not support the smaller cluster site, so doing this will not have any effect. Again, when in doubt, contact the manufacturer.

I'm sorry if I have made this sound like a terrible job. I have reported everything I know that can possibly go wrong with this, including things I've experienced firsthand and things people have told me about.

As an alternative to using the BACK-UP/RESTORE procedure, you might wish to use John Dickinson's BAC.COM utility (Programming/Utilities, Volume 4 Number 17), which may be downloaded without charge from the PC Magazine Interactive Reader Service. It allows you to back up all the files in one (sub)directory at a time on the proper file-by-file (rather than image) basis, and it allows you to change diskettes as they become full. (This last reason is why you can't easily use the regular COPY command when backing up a whole hard disk.) The files backed up onto floppies with BAC.COM (unlike those made using BACKUP) are immediately editable, so after backing up your hard disk files (two BAC copies are still recommended for absolute safety) and before you FDISK and reformat your hard disk, you can delete the obsolete COMMAND.COM (and other old-version DOS external programs) from the backup floppies, saving some of the hassle when it comes time to put them back onto the newly formatted hard disk.-Ed.1

## Attention Lotus users: This \$79.95 reducing program can save you a ton.

We hate fat files. Specifically, those little porkers from Lotus 1-2-3, Symphony and V.P. Planner. That's why Synex Systems developed SOZ!™ for us. It squeezes the daylights out of your spreadsheet files. By up to 95%. That means you can get up to 95% of your used disk space back. And save 95% on

communications. Right now With SQZ!, a 360K floppy can hold 3 megabytes of work sheets. A 10 megabyte hard disk turns into 100 megs. Now you can say goodbye to floppy bills and inconvenience. Not to men-

tion floppy wait (SQZ! can speed up spreadsheet loading from floppies by as much as 50%). And, you can forget spending all that money on a higher capacity hard drive. You save time, space and trouble. For only \$79.95. Sound too

#### good to be true? Read on Picture the Technology.

The secret to SQZ! is an amazing data compaction technology that was originally used for image processing. That's the high tech word for looking at an entire picture and breaking it down into like components to make it smaller and easier to handle. Anyway, think of a spreadsheet as a picture, group the

blanks and characters together and voila.

"SOZ!: Soon to be essential . . . SOZ! looks like it will become an indispensable utility every serious spreadsheet user will want." ness Software, June 1986

"SOZ! does a marvelous job of making a Lotus user's available disk space appear to grow."

—PC Week, June 1986

Nominated for the 1986 PC Magazine award for technical excellence.

Your data just got skinny. Image processing has proven the technique to be extremely reliable (remember the clarity of Jupiter pictures sent millions of miles by the Voyager space-

cra(t?). Now, SQZ! brings this maximum compaction and reliability to Lotus users. It's actually quite simple. And devastatingly effective. What wasn't quite as simple was hiding it from you . . . that is, making SOZ!

squeeze and unsqueeze files without any action from the user. But we did it. So when you load SQZ!, Lotus loads right After SQZ along with it (taking up only

30K more memory space). Then, when you call up a workor hard disk space back! sheet, SQZ!

unsqueezes it from the disk and pulls it into memory as usual. When you save it, the file's squeezed automatically. Now exit Lotus, and SQZ! goes away too. And you get 30K of memory back. That's all there is to it. It's like getting another hard disk. For \$79.95.

If this sounds sim ilar to what some other software

companies are telling you about their squeezers, don't be fooled. The most they can reduce a 1-2-3 file is 20%. At best. Compare that with our 95%. There's really no comparison.

Squeeze Your Phone Bill. And there's more. SOZ! has a communications option that

actually reformats spreadsheets so they can be sent through electronic mail Requires IBM PC version services that don't support 1-2-3, Symphony or V.P. Plan and PC/MS-DOS 2.0 or later binary file transfer, And because these files are squeezed, they take less time to send, 80%-90%

Compatible with EMS boards and memory resident programs like Sidekick, Note-It and HAL · Utilizes 30K RAM less. So a spreadsheet that might normally take 20 minutes (and cost \$20) now goes in less than three. For only three bucks.

Your Main SOZ!.

Call us today. We'll zip you out a copy of SQZ! right away. Then, if for any reason you're not happy with it or us, send SQZ! back. We'll refund your money. No questions asked

# Why this publication and more than 1,200 others let us go over their books

# once a year.

Some publications, we're sorry to say, keep their readers undercover. They steadfastly refuse to let BPA (Business Publications Audit of Circulation, Inc.) or any other independent, not-for-profit organization audit their circulation records.

On the other hand, over 1,200 publications (like this one) belong to BPA. Once a year, BPA auditors examine and verify the accuracy of our circulation records.

The audit makes sure you are who we say you are. The information helps advertisers to determine if they are saying the right thing to the right people in the right place.

It also helps somebody else important: you. Because the more a publication and its advertisers know about you, the better they can provide you with articles and advertisements that meet your information needs.

BPA. For readers it stands for meaningful information. For advertisers it stands for meaningful readers. Business Publications Audit of Circulation, Inc. 360 Park Ave. So., New York, NY 10010.

TRODUCING THE UPGRADABLE, KPANDABLE, PRODUCTIVIT POWERHOUSE FROM CCI.

## THE CCI ST/286-10

Stop buying technology that becomes obsolete tomorrowl...CCI finally gives you the choice of three power plays...First, the CCI 286 10MHz 'AT', **Includes:** 

 Motherboard wth Intel 80286 .640K of RAM, 1.2 Meg floppy 101 key, enhanced keyboard

. 192 watt power supply

. Clock-calendar with battery back-up Enhanced set-up and diagnostic software and all documentation

• Western Digital controller card **DNLY \$1495** 

# 80386 Upgrade Available

And when your team needs increased speed... The CCI 286 12MHz 'AT'... It Includes:

 Motherboard with Intel 80286
 640K of RAM, 1.2 Meg floppy Full 101 key, enhanced keyboard 192 watt power supply

. Clock-calendar with battery back-up Enhanced set-up and diagnostic software and all documentation Western Digital controller card 80386 Upgrade Only \$800

**ONLY \$2395** 

## THE CCI ST/386

When the going gets tough, call in the speed and power of the CCI 80386... This Powerhouse Includes:

 Intel 32 bit 80386, at 14.2 MHz · 3-eight bit, 3-sixteen bit and 1-thirty two bit expansion slot . 640K RAM and 1.2 Meg floopy Optional high-speed 80287 • Full 101 key enhanced keyboard Serial and parallel ports Norton Rating avg. 18.4

**ONLY \$3195**

## C COMPILER

#### CTRACE DEBUGGER \$39.95

MIX

#### SPLIT-SCREEN EDITOR \$29.95

#### ASM UTILITY \$10.00

Get off to a fast start with MIX C. Our compre-hensive book and nimble C compiler will have you programming in C before you know it.

Our book is your teacher. You'll start right away, compiling and executing C programs. The tutorial takes you step by step through the C C language. You'll learn by example eith a book that's chackfull of sample programs. And the programs creek just fluid. They teach you the important C concepts. An amortisation program teaches you have to use pointers to functions. A data base program teaches you have to

You'll love working with our C compiler. It's half as large and twice as fast as other C compilers. In fact, it's the only full featured C compiler that can be operated comfortably on flappy disks. And as you would nme, was the operator competably on flappy disks. And as you would expect, MIX C is cosy to use. In produces a complete program listing with compile errors clearly identified and explained. If you're been financiated by other C compilers, don't throw in the toxed until you're tried ours. There's a big difference.

Although It's small, MIX C Is not a subset, MIX C supports the full KBR standard, including the extensions that are aften omitted in other Compiller, MIX C cames compiler with a comprehensive book, a standard library of more than 175 functions: a bisaringly fast linker, and tools for optimizing your programs for microllad space or maniforms speed. All of this is yourn for the incredibly low price of \$33.95. That's little more than the cost of most Chooks dame. So don't be if which it. Order your copy today and find out why everyone is switching to C.

WHEN ONE **MAGAZINE IS BOTH BIGGEST** AND FASTEST GROWING,

THERE HAS
TO BE
A REASON.

# 375,000

In the PC/MS-DOS market, there's no shortage of confusion. But one thing is perfectly clear:

PC Magazine has both the largest and fastest growing circulation of any publication.

Its circulation of 375,000 is up 25% from 1986—and moving fast.

PC Magazine is growing so sharply in both subscribers and newsstand sales because it provides a unique response to PC buyers' most pressing need—comprehensive and reliable product reviews.

PC Magazine's readers are brand specifiers, technically knowledge-able people who are charged by their companies and organizations with making specific product choices. They call the shots when it comes to buying.

They know better than anyone

that although the microcomputer industry gives birth to many superb products, it also produces a raft of indistinguishables, and noncompatibles. Their job—should they wish to keep it—is to tell the difference.

PC Magazine has reduced the risks for its readers by taking on the grueling task of creating benchmarks and new testing methodologies and applying them to products in side-by-side comparisons. Its expensive, time-consuming and risky—and well worth the effort.

Helping readers find their way through the tangle of PC products is what we do best. Readers have responded by making us the biggest book in the field, offering advertisers the broadest coverage of the growing PC/MS-DOS market and at the lowest cost per reader.

If you're an advertiser in this market, check out our figures. You won't find better anywhere.

THE BIG BOOK BY ANY MEASURE.

# BIGGER IS BETTER.

Reach the PC/MS-DOS market in a big way with PC Magazine. It's the only magazine delivering:

- the largest PC/MS-DOS circulation
- · the widest coverage,
- segment by segment

  the fastest growth

evaluation

- the best cost efficiency
   the only independent testing laboratory committed to comparative product
- the most regular readership among PC buyers and user group members
- the most pull for direct marketers
  - the largest ad linage
     the greatest reach of brand specifiers in the most conducive buying environment

# COMING UP

AT COMPATIBLES, IZ MIRE AND UP. With clock speeds of up to 16 MHz, the new class of fast AT is bound to appeal to speed-hungry power users. But what users pick up in sheer speed they may lose in compatibility. Some hardware and networking software just won't work with these fast mechines. Will incompatibility kill the fast ATs't Or will their populative freech the industry to develop preducts that take advantage of their speed? Alfred Poor reviews from rew models.

MANUSCRIPT FROM LOTUS It's a word processor and a scientific tool. It's Lotus's new Manuscript software, and it can calculate equations, construct tables, and process long documents for scientists and technical writers. Authors Kaare Christian and Robin Raskin add it all up in their review of Lotus's latest release.

EQUATION PROCESSORS Software designed to solve difficult equations can be a boon to those who do math-intensive work. We review seven equation processors and rank them on scientific capabilities, ease of use, and speed.

#### MATH PROCESSING HARDWARE Math confocessors, 80287 accelerators.

Math coprocessors, 80287 accelerators, array processors, and other hardware products offer mini and mainframe math power at PC prices. Stephen Randy Davis reviews the offerings in math speedup prod-

WORDPERFECT LEARNING AIDS

video adapter offers 37% higher screen resolution than standard EGA cards. Visualize it: your existing software sharper and clearer by more than a third.

Programs like Lotus 1-2-3 and Symphony, with 132 columns and 43 lines. Microsoft Windows in 640 x 480, too. And AutoCAD. As well as EASYCAD, EGA Paint, GEM, Dr. Halo II, In A Vision, Windows Draw, Windows Graph, and much more.

In fact, with all this information on the screen, there's only one thing there's less of.

Strain on your eyes.

That's because the VEGA Deluxe gives you both 640 x 480 and 752 x 410 resolution, (Of course, for more than 640 x 350, the VEGA Deluxe requires a Multisync\* or equivalent.)

The VEGA Deluxe is also compatible with every other video standard: EGA, CGA, Hercules and MDA. And when used with a compatible monitor, it automatically selects which mode is right for your software's needs.

At Video Seven, we've sold over 200,000 EGA cards to people who've seen the difference. If you'd like to see the

difference for yourself, just call 1-800-238-0101 for the name of the Video Seven dealer nearest you. (In California, call 1-800-962-5700.)

The VEGA Deluxe. It puts everything in proper focus.

Video Seven Inc., 46335 Landing Parkway. Fremont, CA 94538.

We make a clear difference.
